

# akimbo<sup>2</sup>

## RG81

The Akimbo<sup>2</sup> is the second iteration of the popular mid-line-attachable climbing device for tree care. Like the original, the Akimbo<sup>2</sup> allows you to position, ascend and descend in stationary or moving rope systems (SRS or MRS) without additional equipment or detaching from your saddle.

Adjustable friction settings optimize performance on ropes ranging from 11.5 mm to 12.7 mm, all without tools and without an approved ropes list. The new Akimbo<sup>2</sup> also features an additional SRS tending option, as well as modifications for improved performance on rope and replaceable components that extend service life.

The Akimbo<sup>2</sup> is intended for experienced users and not for novice climbers. Read the user manual thoroughly before use.

Rope Diameter:  
11.5 mm - 12.7 mm

Weight:  
10.6 oz  
301 gm

Working Load Limit:  
30 to 130 kg  
66 to 286 lbs

Certifications:  
TS NO. RG81/2025  
CE 0598
